**19. Course Description:**

As stated in the approved study plan.

This course covers fundamental concepts, techniques, and applications of quantitative risk analysis and risk-informed decision-making across engineering fields. It introduces key risk management concepts such as risk tolerability and ALARP (As Low As Reasonably Practicable). The course explores the HAZOP methodology for identifying process hazards, along with other risk assessment tools like LOPA and FMEA. It also covers the structure and purpose of an HSE Management System (HSE MS) and the development of safety cases to support risk mitigation strategies.
